VOLUME 13 / 2016

View to the west from the ridge between Galtseitjoch and Große Schlenkerspitze (Lechtal Alps; see field trip 4, Figs. 7 and 10 for location), parallel to the fold axis of the Muttekopf syncline. The syncline is seen in three consecutive ridges. In the foreground, a round, open syncline is seen in the Gosau Group, while in the next two ridges, it is a tight chevron fold in the Hauptdolomit.
